Combing Won't Rid Hair of Dandruff

The only sure way to get rid of dandruff is to discolve it, then you destroy it entirely. To do this, get about four onces of ordinary liquid arven: apply it at night when retiring; use enough to moisten the scalp and rub it in gently with the finger tipe. To this tonight, and by morning, most if not all, of your dandruff will be gone and three or four more applications will completely dissolve and entirely destroy every single sign and trace of it, no matter how much dandruff you may lave.

You will find, too, that all itching and digging of the scalp will stop at once, and your hair will be fluffy, justrous, glosse, alky and soft, and look and feel a hundred times better.
You can get liquid arvon at any drug store. It is inexpensive and never fails to do the work.

At the instance of the government a company has been formed to grow cotton in the Belgian Congo. The company will have a capital of 5,000,000 francs, and financial interest and the Flemish spinners are enthusiastic over the idea and have promised it support. Fiemish spinners are entusiastic over the idea and have promised it support. Some little cotten already has been grown in the Congo under government ausplices but the present venture is to be operated on a purely commercial basis. The chief difficulty in the way of immediate success is admittedly the labor situation in the Congo. The natives there do not as a rule take kindly to innovations, and a certain education will be necessary before the labor necessary to produce crops of international significance can be obtained.

The Heigian government, however, already has attacked this problem and has undertaken to establish training courses for natives at the government agricultural stations. Natives will be given courses lasting nine months, and entrants will be encouraged by the receipt of special wages.
